B. C. A. (Sem. IV) Examination

April/May – 2011

CS-21 : RDBMS Using Oracle

(New Course)

Time : 3 Hours]

[Total Marks : 100

1 Answer the following : (any four) 20

- (1) What is Join ? List out available Joins and explain any two joins with example.
- (2) Justify Oracle as RDBMS.
- (3) List various types of SQL Statements. Explain DDL statements in detail.
- (4) Write a note on Package.
- (5) Discuss View with suitable example.

2 Answer the following : (any four) 20

- (1) What is constraint ? List and explain the different type of constraints supported by Oracle.
- (2) Write a brief note on Cursors.
- (3) Explain Oracle Instance Architecture in detail.
- (4) Describe Transaction, Commit, Rollback and Savepoint with example.
- (5) Explain following operators with example :
 - (i) Any
 - (ii) Like
 - (iii) In
 - (iv) Between
 - (v) Exists.

3 Answer the following : (any four) **20**

- (1) Define the meaning of backup and recovery.
List out different types of backup and explain each briefly.
- (2) What is Net 8 ? Explain its features.
- (3) Explain trigger with example.
- (4) Explain PL/SQL Block Structure with example.
- (5) Discuss %TYPE and %ROWTYPE with example.

4 Attempt the followings : **20**

- (a) Define following terms : (any four)
 - (1) Snapshots
 - (2) Database Links
 - (3) Sequence
 - (4) Record
 - (5) BLOB.
- (b) Differentiate the following : (any two)
 - (1) Join Vs. SubQuery
 - (2) SQL Vs. PL/SQL
 - (3) Nested Table Vs. Varray.

5 Attempt the following : **20**

- (1) Consider the following tables and solve given queries :

Table Name : Author_Master

Fields : Author_ID (Primary Key), Author_Name

Table Name : Book_Master

Fields : Book_ID (Primary Key), Publication, Price,
Author_ID (Reference to Author_ID of Author_Master)

- (a) Create above tables with appropriate constraints.
- (b) Display all records from both tables.
- (c) Display author details who has written book for Wrox Publication.
- (d) Display author details whose book price is greater than 500/- rupees.

(2) Consider the following tables and solve given queries :

Table Name : Employee

Fields : Emp_No (Primary Key and Must Start with 'E'),
Emp_Name, Salary

- (a) Create above table with appropriate constraints.
- (b) Write a PL/SQL Block which accept employee name and update salary to 10,000/- if found else give proper message.
- (c) Write a procedure which accepts salary and displays employee details according to that.
